

Anastasia Cholakova is a research fellow at the National Institute of Archaeology with Museum – Bulgarian Academy of Sciences, holding a position at the Department of Classical Archaeology. She obtained MA in Archaeology (second subject – History) from Sofia University ‘St. Kliment Ohridski’, with a specialization in archaeology of Roman period and Late Antiquity. Her doctoral project ‘Networks of distribution at the margins of the Empire – late antique glass vessels from the Lower Danube region’ (PhD degree in 2016), as a Marie Curie ESR at the Institute of Archaeology – University College London, was funded by NARNIA (New Archaeological Research Network for Integrating Approaches to Ancient Material Studies) Initial Training Network coordinated by the University of Cyprus.

Anastasia Cholakova has steady academic interests in ancient glass studies and archaeometry, with various publications in these fields. The broader focus of her research is on the aspects of the interaction between society, technologies, and raw materials in antiquity, with a particular emphasis on metal production technologies, their recognition in archaeological record, and interpretation in the context of an anthropological and socio-cultural research.
